

TEAM 19 · PROJECT PROPOSAL

AI Travel Planner

Plan smarter. Travel further.

Web Developing · Gachon University · Department of Computer Science

Mukhammadamin · Abdulazizbek · Asadbek

OVERVIEW

The problem and our solution

⏳

The problem

- Planning a trip takes hours across blogs, maps, and booking sites.
- Generic itineraries ignore a traveler's budget and interests.
- Plans end up scattered in notes, screenshots, and tabs.

✨

Our solution

- An AI planner that builds a day-by-day itinerary in under a minute.
- Plans shaped by destination, trip length, budget, and interests.
- A personal dashboard to save trips and favorites.

CORE FEATURES

What the platform does

AI planning

Personalized itineraries based on interests, time, and budget.

Smart budgeting

An estimated budget shown before planning, so users travel with confidence.

Personalization

Food, nature, culture, shopping, sports: users choose what they love.

Saved trips

User accounts keep favorite plans ready to reopen anytime.

Plus: a destination slider, a **"Surprise Me"** option for undecided travelers, light and dark mode, and a fully responsive layout.

USER FLOW

How it works

1

Pick a destination

Choose a dream place, or let AI suggest somewhere new.

2

Share your style

Enter days, budget, and interests.

3

AI builds the plan

A day-by-day itinerary with places, timing, and estimated cost.

4

Save and go

Keep trips in the dashboard and open them anytime.

TEAM 19

Our team and roles

M

Mukhammadamin

202537558

Backend Developer

Server logic, REST API, and the PostgreSQL database.

A

Abdulazizbek

202537225

Frontend Developer

React interface, routing, and connecting the UI to the API.

A

Asadbek

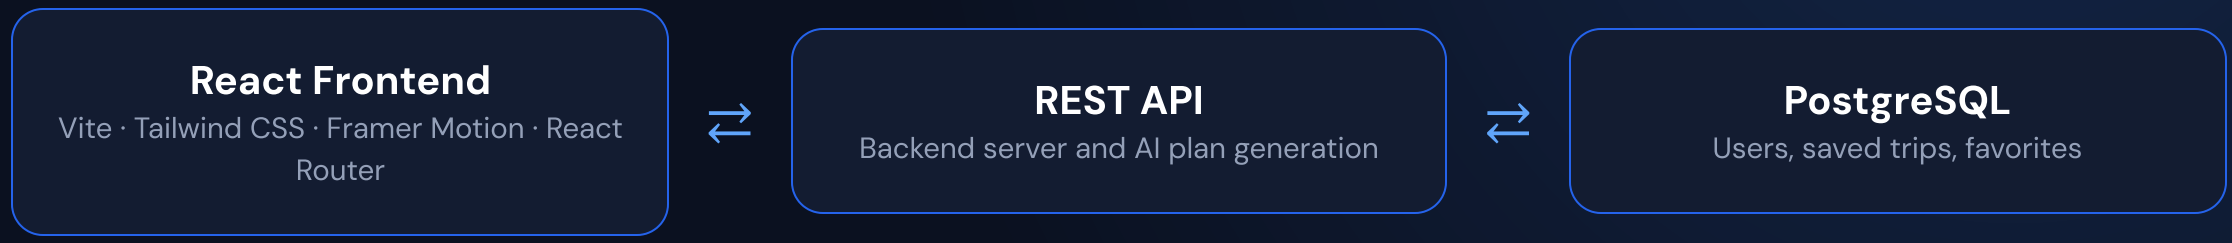

202537228

Designer

Visual identity, page layouts, and the user experience.

TECHNOLOGIES

Architecture and tech stack

React · PostgreSQL · REST API · Vite · Tailwind CSS · Framer Motion · React Router · GitHub Pages

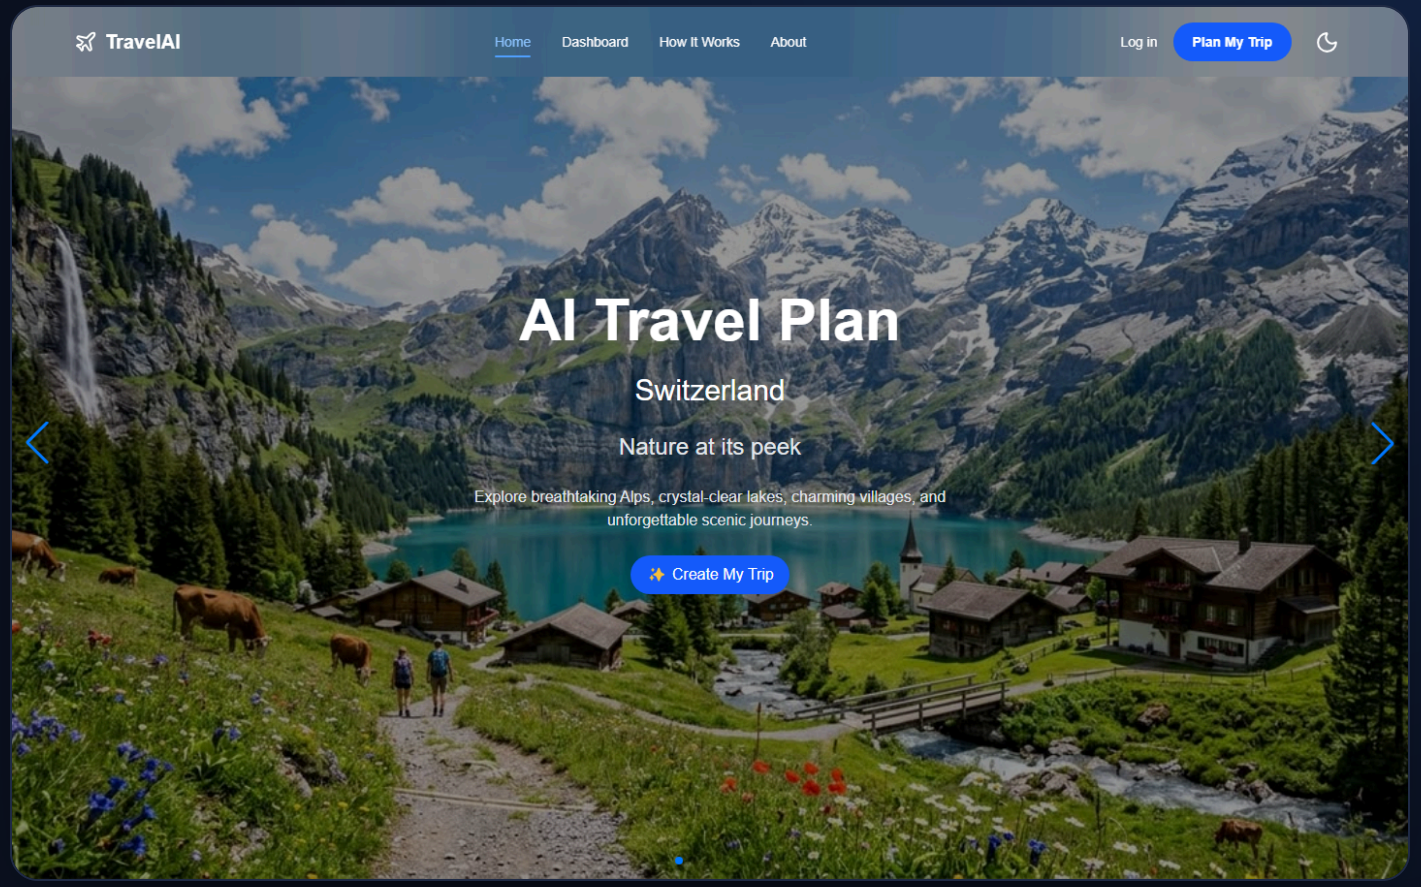

The platform is deployed and available to users worldwide.

INTERFACE

The live platform

Full-screen destination slider, glass-style navigation, and a clear call to action on every screen.

DEVELOPMENT TIMELINE

About one month, start to launch

WEEK 1

The idea

Defined the problem, scoped features, and mapped the user flow.

WEEK 1–2

Design

Sketched every screen and set the visual style.

WEEK 2–4

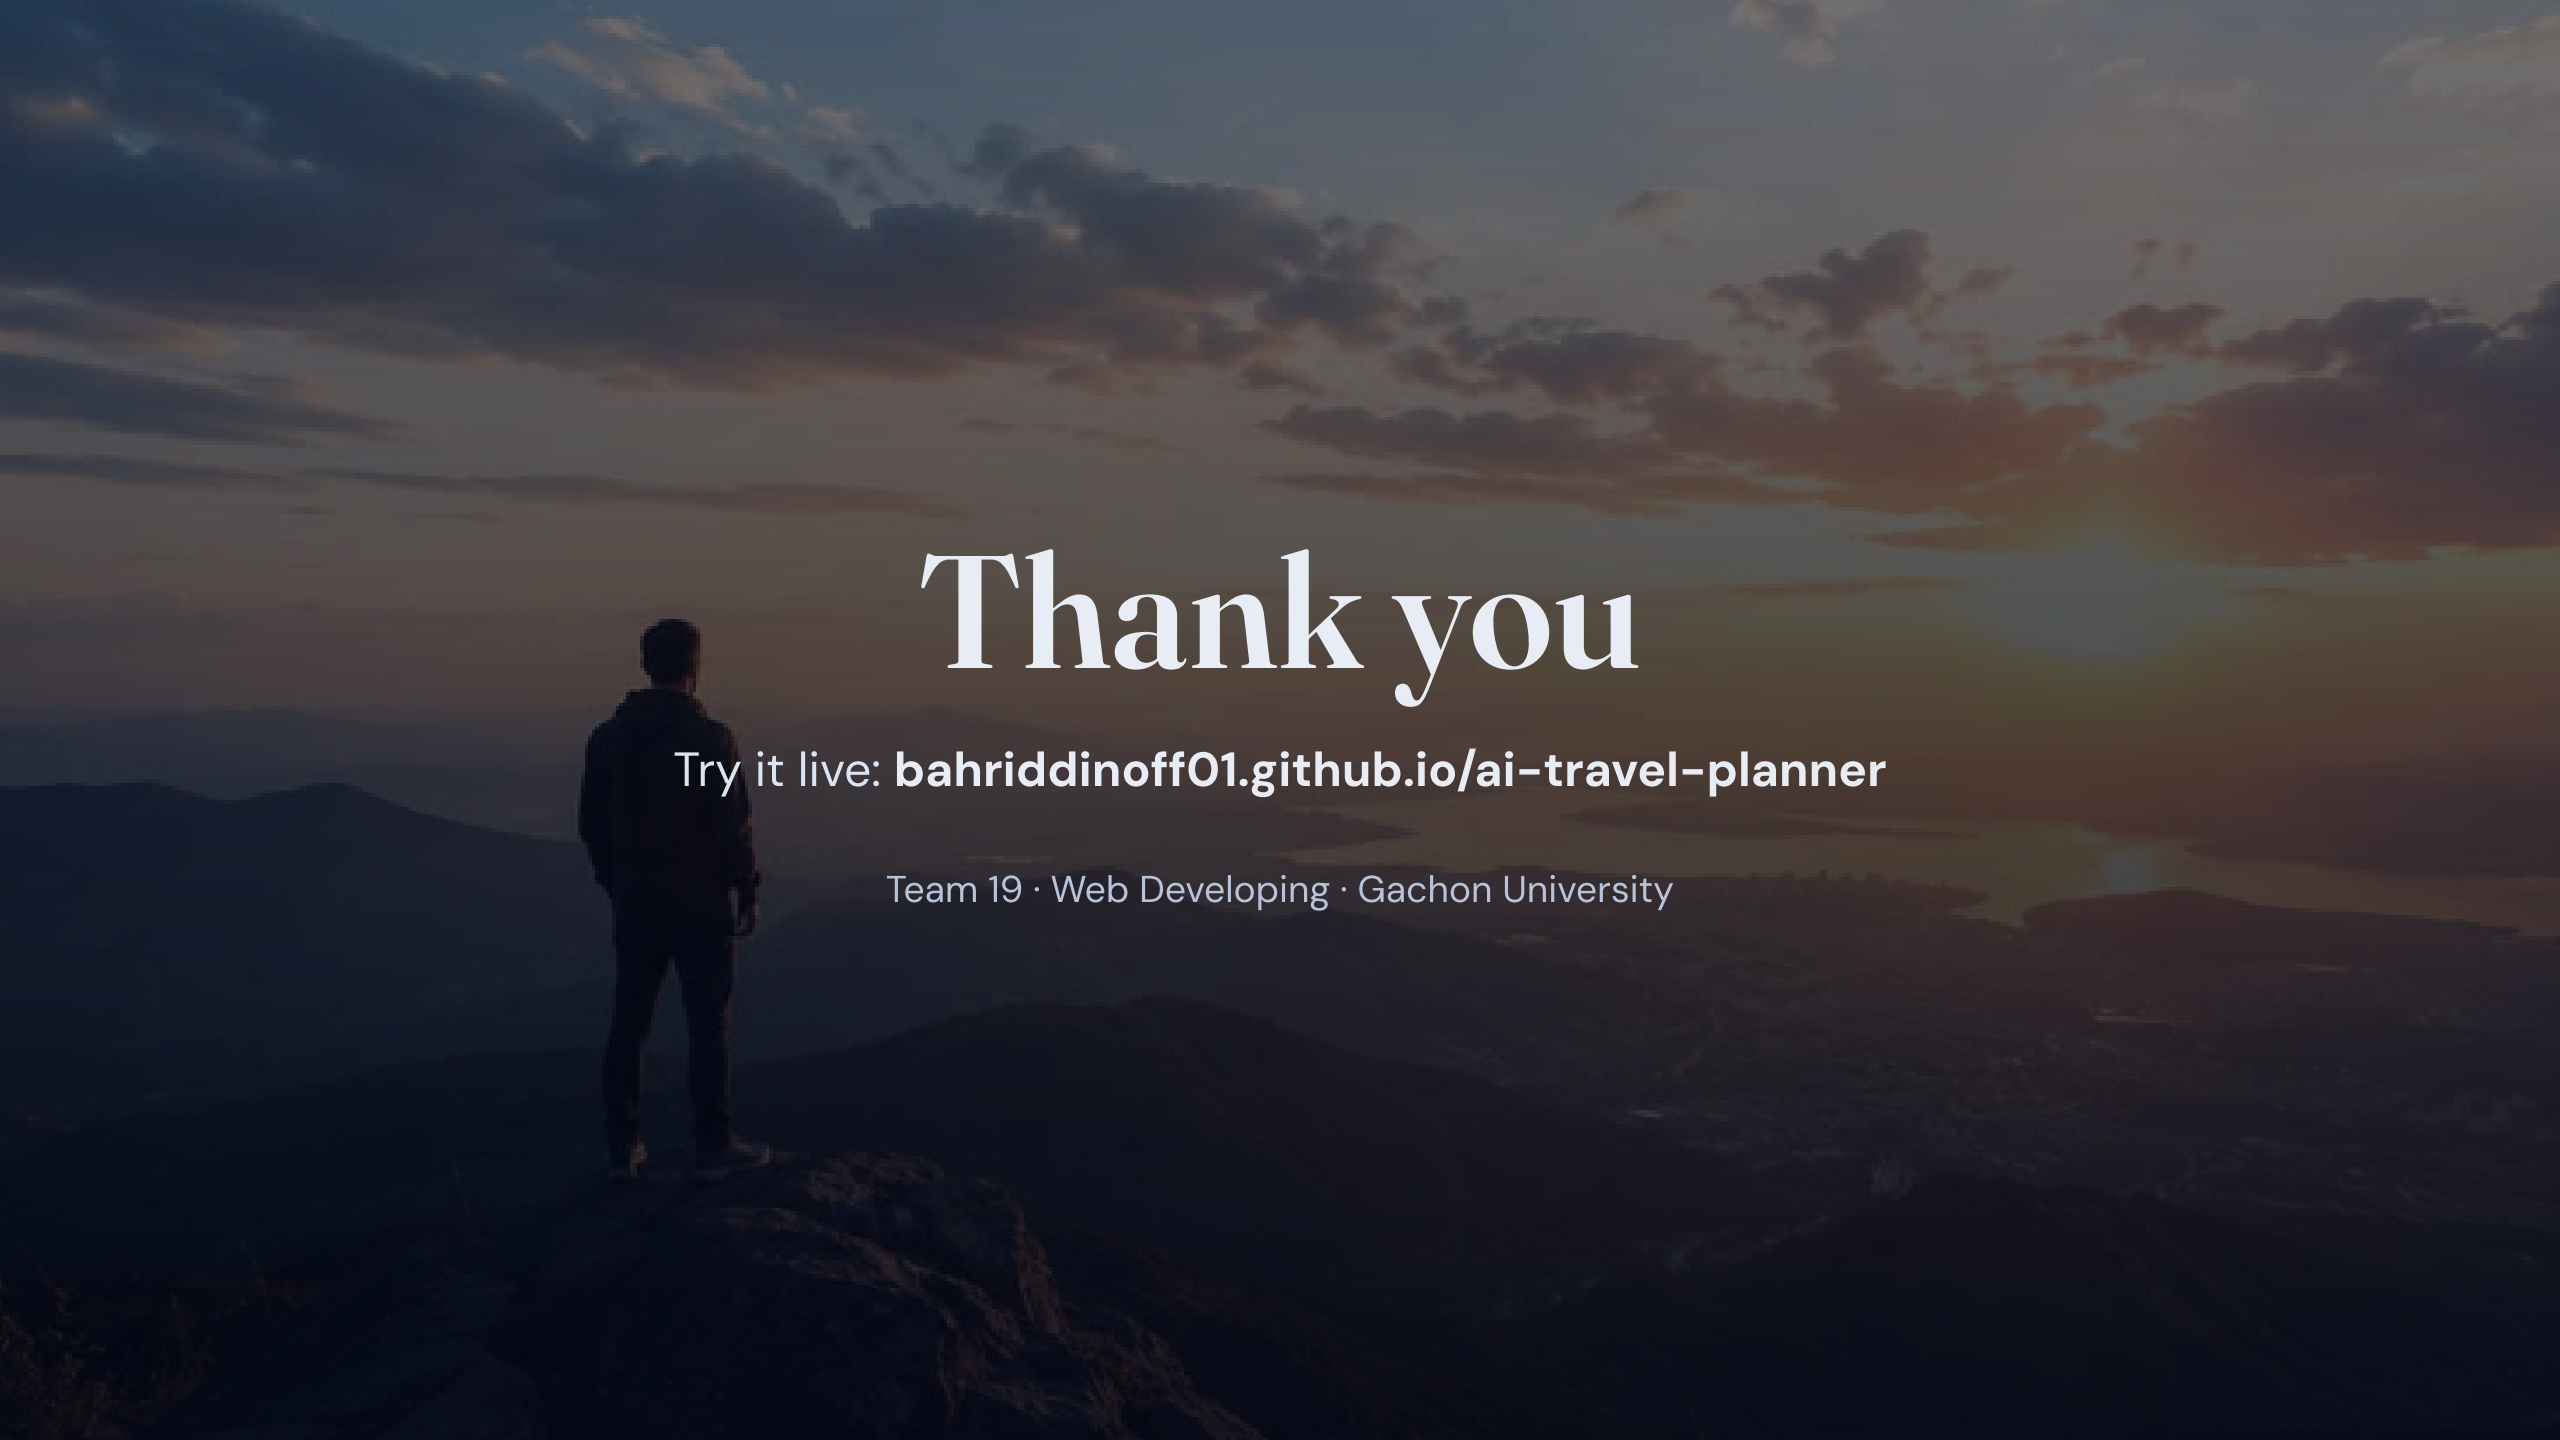

Build

React frontend and a PostgreSQL-backed backend, from scratch.

WEEK 4

Launch

Tested, fixed, and deployed live for anyone to use.

Thank you

Try it live: **bahriddinoff01.github.io/ai-travel-planner**
